

Saved items already show intent. Thirty-day conversion still fails without a coupon.

A wishlist is explicit interest that stalls. Discover why they wait — then finish the judgement. Do not pay for the buy.

NO COUPONS

NO SALE ALERTS

NO PRICE-DROP NAGS

North star. Share of users who buy ≥ 1 wishlisted item within 30 days of saving it.

W2P 30d only moves if shoppers return, finish a judgement, then act

W2P 30d = buyers of ≥ 1 wishlist item in 30 days $\div$ users who saved ≥ 1 item.

1

Revisit

Open the wishlist within 30 days. If they never return, nothing converts.

2

Resolve • secondary

Fit, quality, look. Real — and not the decider after research.

3

Decide • primary

Buy or deliberately drop among 2+ similar saves. Removals count.

4

Act

Bag / checkout. A coupon tap does not count as a win.

Price-waiting is ranked so we do not pretend it is rare. It is set aside because the brief forbids paying for conversion. An MVP may only target Resolve and Decide.

Public shopper voice becomes ranked opportunities, not a sentiment chart

high = 1 · medium = 0.6 · low = 0.3 · Sentiment-only output fails Part 1. [Phase-1 on GitHub](#) · [live voices](#) · [Q1–Q10](#) · [what to focus on](#)

DISCOVERY FINDINGS

Fit ranked first. Sale-wait is #2 — and we still will not use it.

895 reviews read · 150 about saving or waiting · 12 patterns compared · readyForPhase2

RANK 01

0.87

Fit and size

~37% of kept comments. Nominated. Not locked.

RANK 02 · PRICE-FLAGGED

0.83

Waiting for a sale

Counted so we do not pretend it is rare.
Not the MVP.

RANK 03

0.82

Choosing between saves

Decide-side partner. This is the lever research kept.

Hybrid extract: 3 LLM batches failed; 7 themes gap-filled. Funnel is in pipeline stats. Ranking: [studio?view=focus](#)

Shoppers say price. Asked for help, they want a verdict — not a coupon.

5/9

price-shaped main reason

0/9

fit as the *main* reason

8/9

read reviews before buying

2/9

actually wait for a sale

Load-bearing switch

Q12: discount 4 vs information 5. Q13 (no discount option): “is this price good?” 4/9; pick among saves 2/9. All four discount-seekers switched to information — including both in-segment respondents.

Caveat, labelled

Questionnaire, not 5–6 live interviews. 2 of 9 match the stalled shortlister (target 5). Price was not held constant. Closed-option form — no invented quotes. Q14 mean 2.89 — no AI-oracle framing.

[Open the form](#) · [records](#) · [/survey](#) · [synthesis](#)

LOCKED PROBLEM

The stalled shortlister cannot finish a judgement inside the wishlist.

Neither *which of these* nor *is it worth what it costs*. The only tool the app offers is a falling price. Intent parks on a sale that may never arrive in 30 days.

Price is the symptom of a missing judgement aid — not a demand for money.

Segment

Saves, returns, leaves without deciding.
Sale-watchers are a control.

Primary outcome

Shortlist-to-decision. Buy or drop.
Removals count as success.

Falsify

Hold price constant. If it still wins in
segment — stop. Do not ship a coupon.

W2P → revisit / resolve / decide / act → scrape (fit #1) → questionnaire (decide + value confidence) → lock. Tree: proceed, re-scoped — without an incentive. [docs/problem-definition.md](#)

Studio finishes the call with a room and a coach — never a coupon

Comparison is confirmed three ways. Value confidence is the top requested help. Q14 does not support “AI picks winners” (mean 2.89).

Guardrails: evidence ids, confidence bands, not guarantees. Forbidden in code: coupons, EOSS, urgency. Sale-wait takes the look off the hanger.

One storefront to test: discovery, room, and coach

REPO

Client

Shop → wishlist → Studio room → coach (fit / wear / worth).

github.com/vrj87/GradProject3

API

Ingest · analyze · compare · value · events.

Intelligence

Quote-grounded scrape → rank 0.4 / 0.4 / 0.2 → Groq.

Data

themes.json, ranking, survey, problem lock. SQLite in Phase-5.

Deploy · hooks

Vercel intended; URL not live.
coach_opened · compare_completed — proxies.

[room](#) · [coach](#) · [stories](#) · [survey](#) · [form](#) · [problem lock](#)

Run **cd Phase-1 && npm install && npm run dev** → localhost:3000/studio · Metric hooks are proxies.

A finished decision is a win. A coupon tap is not.

NORTH STAR · W2P 30D

Buyers of ≥ 1 wishlist item in 30 days $\div$ savers. The brief. Demo cart/purchase flags are proxies.

Primary · Decide

Shortlist-to-decision: bought or deliberately dropped in 30d $\div$ saves.

Secondary · Resolve

Uncertainty resolution: doubt-cleared items $\div$ items with a recorded doubt.

Leading

Wishlist reopen. Coach opened or keep-one completed $\div$ eligible shortlists.

Guardrails

Coupon clicks $\neq$ success. Return rate must not rise. Time-to-bag must not worsen.

Kill if follow-up talks hold price constant and price still dominates in segment.

Thin segment. Still-binding price. Fake certainty.

In-segment n = 2

Both asked for a discount on Q12. Label it. Recruit stallers. Ask Q3/Q4 with price frozen.

If price is actually binding

The constraint conflict is terminal. The tree already says **stop** — not coupon.

LLM gaps • app-store noise • oracle framing

3 extract batches failed. Quotes must match text. Drop delivery reviews. Q14 mean 2.89 — coach asks three questions, not a winner.

NEXT

Hold price constant

A handful of moderated stalls. If price still wins, stop. If a verdict still wins, keep the room and the coach.
